Installatie instructie

- Let the underlay, just like the carpet to be installed, acclimatize in the closed packaging for at least 24 hours in the space where it will be installed.
- The ideal humidity for carpet installation is between 50–70% and the processing temperature is 15–20 degrees Celsius.
- Work clean and ensure that the substrate is completely grit-free, dust-free, and dry before installation.
- For cutting the underlay, we recommend a standard trapezium (snap-off) blade or carpet knife.
- An underlay cannot prevent the natural movement of a carpet.
- Always follow the installation advice of the carpet manufacturer and adhesive supplier to prevent problems during installation.
