Installation instruction

- Allow the underlay, like the carpet to be installed, to acclimatize in the closed packaging for at least 24 hours in the room where it will be installed.
- The ideal humidity for installation is between 50–70% and the working temperature is 15–20 degrees Celsius.
- Work cleanly and ensure the substrate is completely debris-free, dust-free, and dry before installation.
- For cutting the underlay, we recommend a standard trapezium (snap-off) knife or carpet scissors.
- Use a roller with a maximum weight of 30 kg for fixing on the substrate.
- Always follow the carpet manufacturer's installation advice to avoid problems during installation.
