## Installation instruction

- Let the underfloor, like the floor to be installed, acclimate in the sealed packaging for at least 24 hours in the room where it will be installed.
- The ideal humidity for carpet installation is between 50–70% and the working temperature is 15–20 degrees Celsius.
- Work cleanly and ensure that the substrate is completely free of dirt, dust, and dry before installation.
- For cutting the underfloor, we recommend a standard trapezoidal break-off knife.
- An underfloor cannot prevent the natural movement of a floor; therefore, we recommend leaving 8–10 mm of space along the wall.
- Follow the installation advice of the floor manufacturer to avoid issues during installation.
