UZIN ADHESIVE RECOMMENDATION ESTILLON

Preparation of the substrate
The substrate must comply with and be prepared in accordance with the generally accepted rules of the trade and technology for laying parquet and floor coverings in accordance with the applicable national standards (e.g. EN, DIN, Ö-Norm, SIA, etc.). In particular, the substrate must be level, permanently dry, solid, load-bearing, free of release agents and cracks, and resistant to tension and compression, or must be prepared accordingly. In order to be able to offer a guarantee in the system, the filling work should be carried out with the suitable UZIN filling compounds in conjunction with UZIN primers.

The UZIN System
Floor covering work is carried out with suitable UZIN adhesives. The technical UZIN data sheets of the products must be observed. The processing recommendations are based on tests and practical experience. They represent general information without guarantee of properties, since UZIN has no influence on the site conditions and the execution of the work. Country-specific regulations based on regional standards, building regulations, processing or industry guidelines may lead to specific processing recommendations.
